

PROJECT OVERVIEW

Project:
*US Silica Office Building
Ottawa, Illinois*

Client:
US Silica

Contract:
Design-Build

Harbour Contractors, Inc. was selected as the Design Builder for this two story, 12,000 SF precast / steel structure which sits on caissons and houses the company's operations, training areas, and board room.

It replaces the existing office building that US Silica was using at the plant. After construction of the new facility, we demolished the old building and put in a parking lot for the new offices.
