

Matteson Connection #2

PROJECT OVERVIEW

Project:
Matteson Connection #2
Matteson, IL

Client:
CN Railway Southern Region
Elgin, Joliet & Eastern Railway Company

Contract:
Construction Manager

Harbour Contractors, Inc. installed one new bridge including two abutments, two piers, and retaining walls which will allow southbound trains on the IC mains to exit onto the EJ&E mains in both the east and west directions. We also removed, reinforced, and replaced one precast three-span bridge to allow the IC main to be relocated to the west to make room for the switch that leads to the future northeast connection track.

We removed the existing access to the Metra station and installed new stairs, walls, and an ADA ramp. We also installed a new roadway drop-off loop for passengers entering / exiting the Metra station including new pavement, guard rails, and storm drainage.
